Aktuelle Situation:

- WFI in EP monograph (0169) limited to distillation only
- USP and Japanese Pharmacopoeia allow other purification processes for WFI

Plan:

- Ph. Eur. Water for Pharmaceutical Use Working Party concluded that there is now evidence to support revision of the WFI monograph (0169) to allow for non-distillation technologies for production of WFI
- As a result the HPW monograph (1927) would be made redundant and be deleted from the Ph. Eur.
